

Go Organic

Part-time courses starting soon – call now!

Explore the latest trends in sustainable farming through a science-based approach to a wide range of organic techniques and systems.

Ideal for lifestyle block owners, home gardeners and/or commercial growers, this course will provide key knowledge and skills required for organic growing.

Learn to build ecosystems, promote biodiversity and increase soil and plant health, instead of relying on artificial fertilisers and poisonous sprays.

Topics covered include organic philosophies, certification, soil

management, soil food webs, composting, companion planting, crop rotation, green manures, weed control, pest and disease management, plant knowledge and an introduction to permaculture. This knowledge can be applied not only to food crops, but to the cultivation of any plants – from suburban gardens to pastures, orchards, shelter belts and woodlots.

Upon successful completion you will be awarded a Certificate in Organic Horticulture (Level 3).

Note: Minimum numbers required for course to commence.
